DETAILED ACTION

Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or render obvious wherein a transformer is excited by applying a periodic test signal at different frequencies to a secondary of the transformer, and deriving the eddy current resistance by measuring power absorbed by the secondary of the transformer when the test signal is applied in the combination as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Additional pertinent prior art is as follows:

Eltel Industries discloses a device called CTERP-2000 which began selling in early 2002. The data sheet discloses that the CTERP-2000 applies a test signal to a transformer and measures a plurality of parameters to reflect the performance of the current transformer for relaying applications. In reflecting the performance excitation characteristics, hysteresis loss, and eddy current loss (resistance) are determined by the CTERP-2000. The CTERP-2000 though lacks specifically wherein the transformer is excited by applying a periodic test signal at different frequencies and deriving the

eddy current resistance by measuring power absorbed by the secondary of the transformer when the test signal is applied.
